## Citizens Lifesaving and Survival Program

FOR SCHOOLS • BUSINESSES • PLACES OF WORSHIP • COMMUNITY ORGANIZATIONS

**CLASP is specifically designed for people with little or no medical training, giving them the practical skills to keep injured victims alive until professional help arrives.**

When violence or serious injury occurs, the first person to lay hands on the wounded can often determine their survival by using the simple lifesaving interventions we will teach you.

### WHAT YOU WILL LEARN

**Participants learn how to recognize life-threatening bleeding and act quickly using simple, practical treatment skills.**

1. How to respond effectively during a violent or life-threatening emergency, including the use of safe locations and protective barriers for yourself and the casualty.
2. Include onsite security personnel in the training so they understand their role in a coordinated emergency response.
3. Assess and continually reassess the casualty.
4. Properly treat life-threatening bleeding through the use of tourniquets and proper wound packing.
5. Train with commercial medical gear and improvised gear when needed.
6. Communicate critical information to 911 and responding personnel.

### REALISTIC, HANDS-ON TRAINING

CLASP is not a sit-and-listen course. Each course is customized to the group being trained and conducted in a challenging yet safe and encouraging environment. Participants work through realistic, hands-on scenarios where they must make decisions, use their new skills, and adapt as the situation changes.

**The goal is not to turn participants into medical professionals; it is to give them the confidence and practical skills to act when lives may depend on their actions.**

### EXPERIENCED INSTRUCTORS

CLASP is taught by experienced military, law-enforcement, Fire/EMS, and tactical-medical instructors, as well as emergency-room physicians and nurses, who bring real-world experience into every course.

#### [MEET OUR INSTRUCTORS](#)

Fear often comes from not knowing what to do during a violent emergency or mass-casualty incident. That fear is understandable—and can be overwhelming. This one-day CLASP course helps reduce that fear by shining a light on the unknown and addressing it directly. With new knowledge and hands-on skills, participants gain the confidence and know-how to help save lives.

**Schedule CLASP for your business, school, place of worship, or community organization.**

**ONE LIFE SAVED IS NOT ENOUGH.**
